Sterilisation and Endoscopy Decontamination Facility

Aura on behalf of Merit worked to successfully win the contract for the latest project for STERIS.

The contract was to create a new state-of-the-art Decontamination Super Centre (DSC) in South West London. The project comprises of modifying the 4 units to create a single Sterile Services Decontamination processing facility with a design capacity to decontaminate up to 15 million surgical instruments.

The project works include the following:

- Internal construction and fit out of process areas for surgical instrumentation and peripheral support area
- Installation of automated and validated equipment to reprocess surgical instruments
- Installation, testing, connection and commissioning of electrical building services
- Installation, testing, connection and commissioning of mechanical building services including installation of chillers and installation of first phase STERIS equipment including autoclaves, multichamber washers and cart washers including final connections of services

Specialist bid management services provided by Aura ensured a high quality executive service, which is methodical and easy to read, this ensuring the bid makes a powerful first impression.

Aura ensure that any challenges are managed to the clients satisfaction. Working with Merit, works were tailored to ensure the high quality modules are custom designed and installed to STERIS full satisfaction

Aura enjoyed working with Merit on this project changing existing warehouse units into a state of the art decontamination facility.
